Aakarshan Sharma

AI/ML Engineer · Data Analyst · Software Developer · Game Developer

AI/ML-focused BCA student who has shipped a production Retrieval-Augmented Generation (RAG) system for financial-document intelligence using self-hosted LLMs (Ollama), with hands-on experience across the local-AI stack — ComfyUI diffusion pipelines, Qwen and other open-source LLMs, local TTS, and EchoMimic v2 avatar generation. Skilled at prompt engineering, zero-shot computer vision, vector-search pipelines, and building end-to-end AI products from model to UI.

EDUCATION

**Bachelor of Computer Applications (BCA)** 2024 – 2027  
Vivekananda Institute of Professional Studies (VIPS), Delhi  
**CGPA: 8.94 / 10.0** · Expected Graduation: 2027  
*Relevant: Data Structures, DBMS, Statistics, Web Technologies, OOP*

Class XII — CBSE 2024  
**92% — Distinction**  
Class X — CBSE 2022  
**84.2%**

EXPERIENCE

- AI/ML Intern — Godfrey Phillips India Limited (GPI)** Jun 2026 – Aug 2026  
*New Delhi, India · On-site*
- Designed and shipped a fully self-hosted Retrieval-Augmented Generation (RAG) system that lets employees query confidential annual reports, financial statements, and spreadsheets in natural language, using open-source LLMs served locally via Ollama with zero external data transmission.
  - Built a multi-stage PDF Document Intelligence pipeline: semantic section detection, structured table extraction, local vision-model image/chart captioning, deterministic per-year financial-fact extraction, and a persistent vector database.
  - Engineered a live, pandas-based spreadsheet analytics engine converting natural-language questions into validated query specifications executed directly against real data, including automatic reshaping of pivoted MIS-style reports.
  - Cut end-to-end inference latency 10–20x (20–30 min → 60–180 sec) by migrating LLM serving to a dedicated GPU-capable server, and shipped 4 access surfaces (terminal, web UI, REST API, desktop launcher) with department-level access control.

PROJECTS

- AI / ML PROJECTS**
- Buy or Wait? — HackerRank Orchestrate 2026** · Python · Agentic AI · Cash-Flow Forecasting  
[github.com/AKKI0003/hackerRankOrchestrate-project](#)
- Built an AI financial decision agent for HackerRank Orchestrate (Sep 2026) that decides, per purchase request, whether to pay in full, pay partially, use installments, wait, or not proceed.
  - Personalized every recommendation to the user's cash flow, commitments, and payment preferences.
- GyaanEmpire — Fund My Crazy 2026** · React · Vite · Tailwind · Node.js · Gemini API  
[github.com/AKKI0003/FundMyCrazy\\_GyaanEmpire](#)
- Built a Clash-of-Clans-style study game where Gemini turns notes into a skill-tree of island buildings.
  - Engineered a server-authoritative clan-war raid engine where every strike is a quiz answer grounded in the learner's own notes, with 31 rule tests.

- FleetMind — Code Cubicle 6.0** · Qdrant Edge · three.js · Python · Ollama  
[github.com/AKKI0003/CC6.0\\_project](#)
- Built a warehouse robot-fleet simulation with per-robot Qdrant Edge shards and partial-snapshot fleet sync.
  - Developed a three.js 3D warehouse with A\* route planning, a knowledge minimap, and an Ask Robot panel answering from local memory.

## Nagrik — AI-Powered Civic Issue Reporter · React · Node.js · PostGIS · FastAPI · OpenCLIP

Hackathon build for HACK-4-CROWN (Social Impact track) · Team "3 Dost"

- **Built a map-based, geospatial citizen-issue reporting platform** with a React + Leaflet client and a Node.js/PostGIS backend using proximity queries for location-aware issue clustering.
- **Designed a zero-shot computer-vision classification service** (OpenCLIP + opennsv2) to auto-categorize submitted photos and a cosine-similarity pipeline to deduplicate repeat reports of the same issue.

## Ambulance Routing API · Flask · Python · SQLite · Google Maps API

Team Lead — Dynamic Emergency Routing

[github.com/AKKI0003/IBM-AI-ambulance-](https://github.com/AKKI0003/IBM-AI-ambulance-)

- **Led a cross-functional team** to build a RESTful API for real-time ambulance dispatch with intelligent hospital matching based on threat levels, transit time, and live bed availability.
- **Engineered a multi-criteria decision algorithm** for dynamic hospital ranking under time-critical constraints, and automated ETL pipelines for secure, overflow-safe hospital data ingestion and storage.

## GAME DEVELOPMENT

### Operation Rust · Unity · C# · Game AI

[github.com/AKKI0003/OperationRust](https://github.com/AKKI0003/OperationRust) [akki109.itch.io/operationrust](https://akki109.itch.io/operationrust)

- **Built a 2D top-down stealth game with intelligent AI-controlled guards**, with FSM behavior, custom A\* pathfinding, and vision-cone/line-of-sight detection for patrol and chase mechanics.
- **Designed a full mission-based gameplay loop** (disable radar dish → infiltrate VIP building → retrieve intelligence → escape via helipad) with menus, victory/game-over states, and audio/UI.

### Time-Loop Puzzle Platformer · Unity · C# · 2D Game Dev

Developer — Ghost-Agent Mechanic

[akki109.itch.io/echocrawl](https://akki109.itch.io/echocrawl) [github.com/AKKI0003/EchoCrawl-Prototype-2DGame-](https://github.com/AKKI0003/EchoCrawl-Prototype-2DGame-)

- **Built a 2D puzzle-platformer with a custom time-loop recording/playback system** converting past player actions into synchronized autonomous ghost agents for multi-agent puzzle-solving.
- **Designed scalable level architecture** with timed triggers, button-door logic, and state-dependent environments.

### Roblox Combat System & Multiplayer Framework · LuaU · Roblox Studio

[roblox.com/games/124965317072891/VaultMind](https://roblox.com/games/124965317072891/VaultMind)

- **Developed a production-deployed modular combat system** with weapon handling, damage logic, and real-time multiplayer sync across multiple simultaneous clients.
- **Implemented responsive dynamic UI**: health bars, hit feedback, and full-screen effects — optimized for client performance at scale.

### 2D Platformer Game (Roblox) · LuaU · Roblox Studio

- **Built a complete Mario-inspired side-scroller from scratch** with hand-crafted Lua scripts for camera, player physics, damage, UI, and sound — zero external plugins.
- **Shipped full gameplay loop**: smooth 2D movement, spike hazards, checkpoint saving, collectible star system, live score counter, and level-complete screen.

### Casino Slot Machine Game · Unity · C# · UI/Gameplay Systems

[github.com/AKKI0003/SlotMachineGame](https://github.com/AKKI0003/SlotMachineGame) [akki109.itch.io/slots](https://akki109.itch.io/slots)

- **Developed a fully playable casino-style slot machine game** featuring randomized reel generation, betting mechanics, dynamic payout scaling, and middle-row win detection logic.
- **Implemented smooth reel animations, audio feedback**, animated UI transitions, retry/game-over mechanics, and a polished main menu.

## APP DEVELOPMENT

### SpideyTracker · Flutter · Firebase

- **Built a private, real-time location-sharing mobile app** with a Spider-Man pixel-art aesthetic, featuring a live radar view, encrypted group chat, static memory pins, voice lines, and a photo journal, backed by Firebase for real-time sync.
- **Iterated across a large, actively-evolving codebase**, owning the app from architecture to UI polish.

## EXTRA CURRICULARS

### President, Theatre Society — TAMAASHA, VSIT (VIPS) Oct 2024 – Present

Delhi, India

- **Actively participate in theatre activities**, contributing in acting, sound design, and cross-team collaboration.

### Member, Theatre Society — Aflatoon, VIPS-TC Dec 2025 – May 2026

*Delhi, India*

- **Actively participated in theatre activities,** contributing in acting, teamwork, and event production.
